

**IN THE CLAIMS**

Kindly amend claims 1, 3, 5, 6, 8, 10, 15, 17, 19, 21, 24 and 26 and delete claims 2, 4, 7, 11, 18, 20, 23 and 27 without prejudice to, or disclaimer of, the subject matter therein. The subject matter of these deleted claims has been incorporated into other claims.

The following is a complete listing of revised claims with a status identifier in parenthesis.

**LISTING OF CLAIMS**

1. (Currently Amended) A method for use in wireless equipment, the method comprising the steps of:

transmitting signals using frequency hopping over a time period  $T$ , by pseudorandomly selecting a frequency from a set of  $N$  frequencies such that over at least a portion of the time period  $T$ , the frequency selection is constrained to less than the  $N$  frequencies.

2. (Cancelled)

3. (Currently Amended) A method of frequency hopping for use in wireless equipment, the method comprising the steps of:

storing a set of hopping frequencies; and pseudorandomly selecting frequencies from the set of hopping frequencies over a time period  $T$  by limiting the available frequencies from the hopping set over at least a portion of the time period  $T$ .

4. (Cancelled)

5. (Currently Amended) A method of frequency hopping for use in wireless equipment, the method comprising the steps of:

initializing a hopping set to a size of  $F$  frequencies, the hopping set used to pseudorandomly select therefrom hopping frequencies over a time period  $T$ , and

reducing the size of the hopping set over a portion of the time period  $T$  by at least one frequency.

6. (Currently Amended) A method of frequency hopping for use in wireless equipment, the method comprising the steps of:

initializing a hopping set to a size of  $N$  frequencies, the hopping set used to select therefrom hopping frequencies over a time period  $T$ ; and

pseudorandomly selecting frequencies from the hopping set over the time period  $T$  such that at least one of the selected frequencies is prohibited from subsequent selection in at least a portion of the time period  $T$ .

7. (Cancelled)

8. (Currently Amended) A method of frequency hopping for use in wireless equipment, where a hopping set is initialized to a size of  $N$  frequencies, the hopping set used to select therefrom hopping frequencies over a time period  $T$ , the method comprising the steps of:

determining a hopping index value;

modifying the hopping index value by at least the modulo of a number  $F$ ,  
where  $F \leq N$ ;

pseudorandomly selecting a hopping frequency from the hopping set of a  
function of the modified hopping index value;

adjusting the order of the hopping set such that the selected hopping  
frequency is now at a position corresponding to the value of  $F$ ;

reducing the value of  $F$ ; and

returning to the determining step.

9. (Original) The method of claim 8 wherein the value of  $F$  reaches  
a predefined minimum value, further including the step of shifting the hopping  
set in a cyclical direction by a value equal to a difference between a predefined  
maximum value for  $F$  and the minimum value, modulo  $N$ .

10. (Currently Amended) A method for frequency hopping for use in  
wireless equipment, the method comprising the steps of:

initializing a hopping set to a size of  $N$  frequencies, the hopping set used  
to select therefrom hopping frequencies over a time period  $T$ ;

dividing the hopping set into an allowable frequency set and a prohibited  
frequency set;

pseudorandomly selecting frequencies from the allowable frequency set;  
and

after at least one frequency selection, adjusting the membership in the  
allowable frequency set and the prohibited frequency set.

11. (Cancelled)

12. (Original) The method of claim 10 wherein membership in the allowable frequency set and the prohibited frequency set at a current time is derived from knowledge of the allowable frequency set and the prohibited frequency set at an earlier time.

13. (Original) The method of claim 10 wherein knowledge of the allowable frequency set and the prohibited frequency set at a particular time is provided by one wireless endpoint to the other wireless endpoint through explicit signaling.

14. (Original) The method of claim 10 wherein all  $N$  frequencies in the hopping set are assumed allowable at pre-determined time instants.

15. (Currently Amended) A ~~method~~ of pseudorandom frequency hopping method for use in wireless equipment, the method comprising the steps of:

dividing a hopping set into an allowable frequency set and a prohibited frequency set; and

transmitting information associated with the division of the hopping set to another wireless endpoint.

16. (Original) The method of claim 15 wherein the transmitted information enables the other wireless endpoint to derive the allowable frequency set.

17. (Currently Amended) A wireless endpoint comprising:  
a transmitter for transmitting signals using frequency hopping over a time period  $T$ ; and  
a processor for pseudorandomly selecting a frequency from a set of  $N$  frequencies such that over at least a portion of the time period  $T$ , the frequency selection is constrained to less than the  $N$  frequencies.
18. (Cancelled)
19. (Currently Amended) A wireless endpoint comprising:  
a memory for storing a set of hopping frequencies; and  
a processor for pseudorandomly selecting frequencies from the set of hopping frequencies over a time period  $T$  by limiting the available frequencies from the hopping set over at least a portion of the time period  $T$ .
20. (Cancelled)
21. (Currently Amended) A wireless endpoint comprising:  
a memory for storing a hopping set comprising  $F$  frequencies, the hopping set used to pseudorandomly select therefrom hopping frequencies over a time period  $T$ ; and  
a processor for reducing the size of the hopping set over a portion of the time period  $T$  by at least one frequency.

22. (Currently Amended) A wireless endpoint comprising:

a memory for storing a hopping set comprising  $N$  frequencies, the hopping set used to select therefrom hopping frequencies over a time period  $T$ ; and

a processor for pseudorandomly selecting frequencies from the hopping set over a time period  $T$  such that at least one of the selected frequencies is prohibited from subsequent selection in at least a portion of the time period  $T$ .

23. (Cancelled)

24. (Currently Amended) A wireless endpoint comprising:

a memory for storing a hopping set comprising  $N$  frequencies, the hopping set used to pseudorandomly select therefrom hopping frequencies over a time period  $T$ ; and

a processor for (a) determining a hopping index value, (b) modifying the hopping index value by at least the modulo of a number  $F$  where  $F \leq N$ , (c) selecting a hopping frequency from the hopping set as a function of the modified hopping index value, (d) adjusting the order of the hopping set such that the selected hopping frequency is now at a position corresponding to the value of  $F$ , (e) reducing the value of  $F$ , and (f) returning to (a).

25. (Original) The wireless endpoint of claim 24 wherein when the value of  $F$  reaches a predefined minimum value, the processor further shifts

the hopping set in a cyclical direction by a value equal to a difference between a predefined maximum value for  $F$  and the minimum value, modulo  $N$ .

26. (Currently Amended) A wireless endpoint comprising:

a memory for storing a hopping set comprising  $N$  frequencies, the hopping set used to select therefrom hopping frequencies over a time period  $T$ , and

a processor for (a) dividing the hopping set into an allowable frequency set and a prohibited frequency set, (b) pseudorandomly selecting frequencies from the allowable frequency set, and (c) after at least one frequency selection, adjusting the membership in the allowable frequency set and the prohibited frequency set.

27. (Cancelled)
